Some new faunistical records of *Micropeza* Meigen in East Turkey (Diptera, Micropezidae)

Muhabbet Kemal Ahmet Ömer Koçak

Abstract: Some new faunistical records of *Micropeza* Meigen in East Turkey (Diptera, Micropezidae). *Cesa News* 107: 1-3, 3 figs.

In this short paper, new faunistical records of *Micropeza nigra* Lw. from East Turkey are given together with illustrations in nature.

Key words: *Micropeza nigra*, *Micropezidae*, *Diptera*, fauna, Bitlis, Muş, Turkey.

During some excursions realized by the authors in East Turkey, in the spring season, observation on the members of the family *Micropezidae* were made. In this short paper, several specimens of *Micropeza nigra* Loew are evaluated faunistically, pictorial observations on the adult behaviour are added.

***Micropeza nigra* Loew, 1874**

Brief information in our database are given below:

Original reference: *Micropeza nigra* Loew, 1874, *Z. Gesammt. Naturw.* 42: 418. Type: Iran.

Synonyms: *nigra* Loew, 1874; *diversipes* Villeneuve, 1913; *niger* Czerny, 1930.

Range (in code): JO IR TR IL Pa SY Dms AF 13 25 49 13F 13F20 25A 49F 49Fe.

This vernal species was hitherto known from Erzurum (NE Turkey) (Stuke, 2010; Koçak & Kemal, 2013, 2014). In the present paper, it is reported and illustrated from Bitlis and Muş Provinces for the first time (**Figs.1-3**).

Material studied: 1♀. East Turkey: Bitlis Province, Mutki, Kavakbaşı 1350m, 21 5 2010, leg.

M.Kemal (**Fig.1**); 4♀. East Turkey: Muş Province, Varto, Taşdibek SE 1475m, 27 5 2015, M Kemal (coll. Cesa) (**Figs. 2,3**).

This species is distinguishable from other relatives in the family by its black colouration of the body and most of the legs (Freidberg, 1984). It is also known from East Mediterranean countries, Iran and Afghanistan. In Turkey, it is currently known only from three provinces. If a careful investigation of the herbaceous plants in spring is realized, it is believed that this species may easily be found in many provinces in Turkey.

Previously known *Micropeza* species from Turkey was *M. corrigiolata* (L.). Loew (1868) reported this species from “Kleinasien” without locality.

First list of the scientific names referring to the geographical entities based upon the info-system of the Cesa I. *Pterygota* (excl. *Lepidoptera*)

Ahmet Ömer Koçak Muhabbet Kemal

Abstract: First list of the scientific names referring to the geographical entities based upon the info-system of the Cesa I. *Pterygota* (excl. *Lepidoptera*). *Cesa News* 107: 4-50.

In this paper, totally 3478 names, attributed to the geographical entities, are listed according to their 260 families.

Key words: Scientific names, geographical names, *Pterygota*, *Insecta*.

Within the framework on the Entomofauna of the Old World, the authors have an interest about the etymological origin of the scientific names that used in the *Pterygota*. Of course, it is impossible to fulfill such an enormous work in a single publication within a short period. It is certainly a long-termed program, and its first initial papers are apparently sole publications in the entomological literature.

First comprehensive lists of the patronymic names of the *Lepidoptera* have been published by the authors in two different studies (Koçak & Kemal, 2008; Kemal & Koçak, 2008). More than 5000 patronymic names of the *Lepidoptera* have been listed.

In the present paper, the geographical entities used as a valid scientific names in the *pterygota* groups (except *Lepidoptera*) are evaluated and listed for the first time.

All these works are based upon the info-system of the Cesa. The related database program contains currently 180045 valid taxa. Among them, 27851 scientific names have been evaluated etymologically. The results will be published in parts in this serial.

According to their etymological origins, the authors classified practically the scientific names under the following titles.

(1) Patronymic names. The majority of the defined valid names belong to this group. Most of the personal names used belong to the scientists or their relatives, friends etc. Exceptionally, attribution of the names can also be to different professional groups of the persons living today, or lived in the part. Examples are as follows; *Ammophila nefertiti* Menke, 1964 (*Sphecidae*) from California (U.S.A), *Crambus caligula* Bleszynski, 1961 (*Pyralidae*) from Kenya and Zaire, *Crambus aristophanes* Bleszynski, 1961 (*Pyralidae*) from Kenya, *Crambus midas* Bleszynski, 1961 (*Pyralidae*) from Angola, *Anomocrambus homerus* Bleszynski, 1961 (*Pyralidae*) from South Africa, *Calamotropha cleopatra* Bleszynski, 1961 (*Pyralidae*) from Tanzania; also *Cymothoe jodutta ciceronis* (Ward, 1971) (*Argynnidae*), *Euthalia confucius* (Westwood, 1850) (*Argynnidae*), *Potanthus confucius* (C.Felder & R.Felder, 1862) (*Hesperiidae*), *Khayyamia* Koçak, 1981 (*Acrididae*) from Iran. Within this frame, *Crambus bachi* (*Pyralidae*) from Ethiopia, *Crambus berliozi* (*Pyralidae*) from South Africa, *Crambus mozarti* (*Pyralidae*) from Tanzania, *Crambus rossinii* (*Pyralidae*) from Zimbabwe were also described by Bassi (2012). Artistically, *Eschata rifici* and *Eschata rococo* were also described by Bleszynski in 1965 and 1970 respectively from India, in the family *Pyralidae*. The names, attributed to the persons, interested in politics are: *Arctia festiva arafati* De Freina, 1997 (*Arctiidae*), *Orontobia secreta dalailama* De Freina, 1997 (*Arctiidae*), *Crambus frescobaldii* Bassi, 2012 (*Pyralidae*), and *Parnassius cephalus dengxiaoping* Weiss & Michel, 1989 (*Papilionidae*).

(2) Spiritual names. In this category, the proposed names are rare. Few examples are as follows; *Melitaea ala allah* Bryk, 1940 (*Argynnidae*), *Azanus jesous* (Guérin-Méneville, 1849)

(Lycaenidae), *Polyommatus zarathustra* Eckweiler, 1997 (Lycaenidae), *Kanetisa digna zarathustra* (Wyatt & Omoto, 1966) (Satyridae), *Vartiania zarathustra* Yakovlev, 2005 (Cossidae), *Crambixon zarathustra* Bleszynski, 1965 (Pyralidae), *Chamaesphecia zarathustra* Gorbunov & Spatenka, 1992 (Sesiidae).

(3) Mythological names. These are also divided into groups, like Greek, Indian, etc. Selected examples are as follows; *Dyspessa aphrodite* Yakovlev & Witt, 2007 (Cossidae), *Parnassius mnemosyne* (Linnaeus, 1758) (Papilionidae), *Parnassius apollo* (Linnaeus, 1758) (Papilionidae), *Delias timorensis vishnu* Moore, 1858 (Pieridae), *Calinaga buddha* Moore, 1857 (Argynnidae), *Trabala vishnou* (Lefebvre, 1827) (Lasiocampidae), etc.

(4) Names of tale heroes. This group names were also used as scientific names in Entomology. Examples are: *Acrosyntaxis padishah* (Gozmany, 1963) (Autostichidae) from Arabia, *Aprominta aladdin* Gozmany, 1963 (Autostichidae) from Syria, *Dysspastus djinn* Gozmany, 1963 (Autostichidae) from Middle East countries, *Orpecovalva effendi* (Gozmany, 1963) (Autostichidae) from Iran, *Symmoca huri* (Gozmany, 1963) (Autostichidae) from Afghanistan, *Symmoca sheherezade* (Gozmany, 1963) (Autostichidae) from Fars, *Symmoca sindbad* Gozmany, 2008 (Autostichidae) from Fars, *Symmoca sultan* Gozmany, 1962 (Autostichidae) from Granada, and *Symmoca sahib* Gozmany, 1963 (Autostichidae) from Fars.

(5) Musical compositions, ballad, and folk-songs: This is also a rarity in science. However, several examples are used in the literature. *Eutelia symphonica* Hampson, 1902 (Noctuidae) from South Africa, *Eschata aida* Bleszynski, 1970 (Pyralidae) from India, *Eupithecia hastaria* ssp. *tango* Kemal & Koçak, 2004 (Geometridae) from Argentina, and *Nemoria yellowrosea* Koçak & Kemal, 2008 (Geometridae) from Texas.¹

(6) Sceptered, noble names. Very seldom. Examples: *Cymothoe reginaeelisabethae* Holland, 1920 (Argynnidae) from Africa, *Euapatura mirza* Ebert, 1971 (Argynnidae) from Iran, *Sultania* Koçak, 1987 (Pyralidae) from Turkey, *Semiramis* Becker, 1913 (Bombyliidae), *Hirmoneura kunchuy* Koçak & Kemal, 2012 (Nemestrinidae) from Turkey.

(7) Economic units, pipelines. A single example: *Empis nabucco* Çiftçi, 2012 (Empidae) from Turkey.

(8) Names attributed to local people in the world. There are numerous such names, but it is often difficult to decide about the origin of the names, i.e. afghana, afghanistana, afghanistanica. We have still some difficulties on this point.

(9) Names attributed to the geographical entities. Many scientific names belong to this group. In the present preliminary list, given 3478 names are some examples only.

(10) Plant names. Similarly, many scientific names belong to this group. Especially insect names of the phytophag larvae, as well as names of *Sternorrhyncha* (Aphids, etc.), gall maker wasps (Cynipids, etc.), *Diptera*, etc. are found in this group. Results of such names will be separately published.

(11) Animal names. Names of different animal groups were also used as scientific names in various insect orders. Results of such names will be published separately.

(12) Descriptive names. Numerous scientific names have been given to the insects according to their habitus (markings, colouration, structure etc.). This group names are also under investigation.

There are also many scientific names that cannot be classified under the titles mentioned above.

For the present paper, totally 8558 names of the pterygota have been evaluated etymologically. Among them, 3478 names, attributed to the geographical entities, are listed below according to their 260 families.

List of the patronymic names of the Pterygota will be published next issue of this serial.

¹ The last two names have been proposed by the authors.

The name *tango* has been given to the subspecies inhabits in Argentina. On the other hand, the tango is originally danced in Argentina and Uruguay. In 2009, it is placed in the Intangible Cultural Heritage Lists. <http://www.unesco.org/culture/ich/index.php?RL=00258>

The name *yellowrosea* has been proposed by the authors as a replacement name for *Nemoria albilineata* Cassino, 1927 from Texas, as it is junior secondary homonym of *Nemoria albilineata* Warren, 1909 (from Peru) (Geometridae, Lepidoptera). This name changing action must be done according to the Homonymy Rules of the ICZN. The authors selected the name *yellowrosea* willingly for the moth species inhabiting in Texas. "The Yellow Rose of Texas" is a traditional folk song, and today it is placed in an index of civil war songs. Some verses reminiscent of the great value of the peace that we urgently need in all over the world.
